COUNT I
DIRECT INFRINGEMENT OF U.S. PATENT NO. 8,239,481

11. Plaintiff incorporates by reference each of its foregoing allegations.

12. Plaintiff conducted a pre-filing investigation, comparing the Accused Products to one or more claims of the 481 patent.

13. Based on Plaintiff's pre-filing investigation, without license or authorization and in violation of 35 U.S.C. § 271(a), Defendant directly infringes one or more claims of the 481 patent in this District and throughout the United States, literally or under the doctrine of equivalents.

14. Defendant directly infringes at least claim 1 of the 481 patent in violation of 35 U.S.C. § 271(a) by, among other things, making, using, offering for sale, selling, or importing within this District and the United States its Accused Product, which under claim 1 of the 481 patent provides a method for controlling devices (e.g., the Accused Products) in a computer system, the method comprising:

obtaining a user selection (e.g., a live video feed selected by a user) of one or more of a plurality of networked devices (e.g., a plurality of networked Accused Products) to be manipulated from a user interface (e.g., via an interface application), wherein at least one of the plurality of networked devices requires device-specific protocol instructions that are different from protocol instructions required by at least one of the other plurality of networked devices (e.g., for accessing and communicating with the networked Accused Products, which are different models having their own identification requirements);

obtaining a user interface application corresponding to the selected one or more

networked devices (e.g., the networked Accused Products have a user interface);

transmitting, to at least one user interface selection device (e.g., a smartphone, tablet, or computer), the user interface application corresponding to the selected one or more networked devices so that the user interface can be displayed on the at least one user

interface selection device (e.g., the user interface is displayed on the smartphone, tablet, or computer);

obtaining a user selection of an operation corresponding to at least one selected networked device (e.g., a live video feed);

encoding the selected operation according to a standard communication protocol instruction (e.g., encoding the live video feed according to a wireless communication protocol);

transmitting the selected standard protocol instruction to a server corresponding to the selected networked device (e.g., the live video feed is transmitted from the Accused Products to a server); and

obtaining an output corresponding to the selected operation of the selected networked device (e.g., outputting a live video feed).

15. Claim 1 is understandable to a person of ordinary skill in the art who has the requisite education, training, and experience with the technology at issue in this case.

16. A person of ordinary skill in the art understands Plaintiff's theory of how Defendant's Accused Products infringe claim 1 upon a plain reading of this Complaint, the 481 patent, and claim 1.

17. Plaintiff reserves the right to modify its infringement theory as discovery progresses in this case, and it shall not be estopped for claim construction purposes by its preliminary infringement analysis as provided in this Complaint. Plaintiff's preliminary infringement analysis is not representative of its final claim construction positions.

18. Since at least the date that Defendant was served with a copy of this Complaint, Defendant has known that its Accused Products directly infringe one or more claims of the 481 patent.
